

## DRESSWORM ASSIGNMENT

### Problem Statement:

Develop a simple web application to show food menu of a restaurant, along with an option to add items to the cart.

### Minimum Requirement:

- List complete menu on a web page.
- Feature to add items into the cart.
- Show cart items & their prices.
- Submit Screenshot, Source Code & Instructions after completion.

### Good to have:

- Single Page Application
- Clean and fluidic layout
- Fetch menu from your own (NodeJS) server
- Offline storage of fetched menu

### Preferred Technology stack:

You can develop this application using any tools or framework of your choice.

We recommend you to use some of the below mentioned technologies:

- VueJS / ReactJS / jQuery / Vanilla JS / ...
- Express JS / Node JS / ...
- SQLite / MySQL / MongoDB / IndexedDB / ...

### Sample Data:

You can use this API to get sample list of food menu:

<https://task.dressworm.com/menu.json>

### Quick Hint:

You can check this sample application for reference: <https://task.dressworm.com/>

We are open for new layouts & would love to see your creative imagination at your best.
